BARNESA is the Banana Research Network for Eastern and Southern Africa. The network seeks to increase the contribution of bananas to food security and economic growth within eastern and central Africa. Its goal is to contribute to increased and sustainable agricultural productivity in the region with the purpose of establishing a sustainable commercialized banana sector.

It was established in 1994 by a group of 10 countries of Eastern and Southern Africa to encourage cooperation between national research programmes. The network was accepted and adopted by ASARECA as one of its constituent networks in 1995 and is now part of the ASARECA Staples Crop Programme. BARNESA is managed by a Steering committee that meets every two years. Bioversity International’s regional office in Kampala, Uganda, has been providing the secretariat since 1997.
