Banana cultivar checklist

The banana cultivar checklist is a list of cultivar names and the groups into which they are classified. The main goal of the checklist is to arrive at an internally coherent list of names indicating which ones are synonyms (different names that refer to the same cultivar) and homonyms (similar names that refer to different cultivars). When no synonym has been reported, the local name is repeated in the Cultivar column. Synonyms are linked to each other through a shared name in the Cultivar column. In the absence of a list of accepted cultivar names, the names in that column are the ones provided by the source and as such reflect usage. A link to the corresponding Musapedia page in the cultivar diversity portal is provided when one exists. To provide feedback or contribute entries to the checklist, contact us.

If the filters don't return results, click here to reload the page.
