Plant health

Plant health is the "discipline that uses a range of measures to control and prevent pests, weeds and disease-causing organisms from spreading into new areas, especially through human interaction such as international trade"\(^{[3]}\).

The objective of this portal is to provide general information on the international framework that coordinates the measures to prevent and control the introduction and spread of pests and pathogens of plants.

Contents

- International Plant Protection Convention (IPPC)
- National plant protection organizations
- Quarantine pest
- Pest risk analyses on pests and pathogens of banana

Pests and pathogens of banana

1. What is plant health?
